

The background is a dark blue gradient. It features several vertical white lines of varying lengths. Scattered throughout are small squares in teal, orange, and pink. Some squares are solid, while others are outlined. The overall aesthetic is modern and tech-oriented.

DATA SCIENCE on Microsoft Azure

What is Data Science?

Financial services use cases

Effective customer engagement

Customer profiles
Credit history
Transactional data
LTV
Loyalty

Customer analytics

Customer 360 degree evaluation
Customer segmentation
Reduced customer churn
Underwriting, servicing and delinquency handling
Insights for new products

Faster innovation for a better customer experience

Decision services management

Customer segmentation
CRM data
Credit data
Market data

Financial modeling

Commercial/retail banking, securities, trading and investment models
Decision science, simulations and forecasting
Investment recommendations

Improved consumer outcomes and increased revenue

Risk and revenue management

Transaction data
Demographics
Purchasing history
Trends

Risk, fraud, threat detection

Real-time anomaly detection
Card monitoring and fraud detection
Security threat identification
Risk aggregation

Enhanced customer experience with machine learning

Risk and compliance management

CRM
Credit
Risk
Merchant records
Products and services

Credit analytics

Enterprise DataHub
Regulatory and compliance analysis
Credit risk management
Automated credit analytics

Transform growth with predictive analytics

Recommendation engine

Clickstream data
Products
Services
Customer service data

Marketing analytics

Recommendation engine
Predictive analytics and targeted advertising
Fast marketing and multi-channel engagement
Customer sentiment analysis

Improved customer engagement with machine learning

Azure Machine Learning Services

Technical Details

Azure ML service Key Elements

Models

Environments

Experiments

Deployment

Pipelines

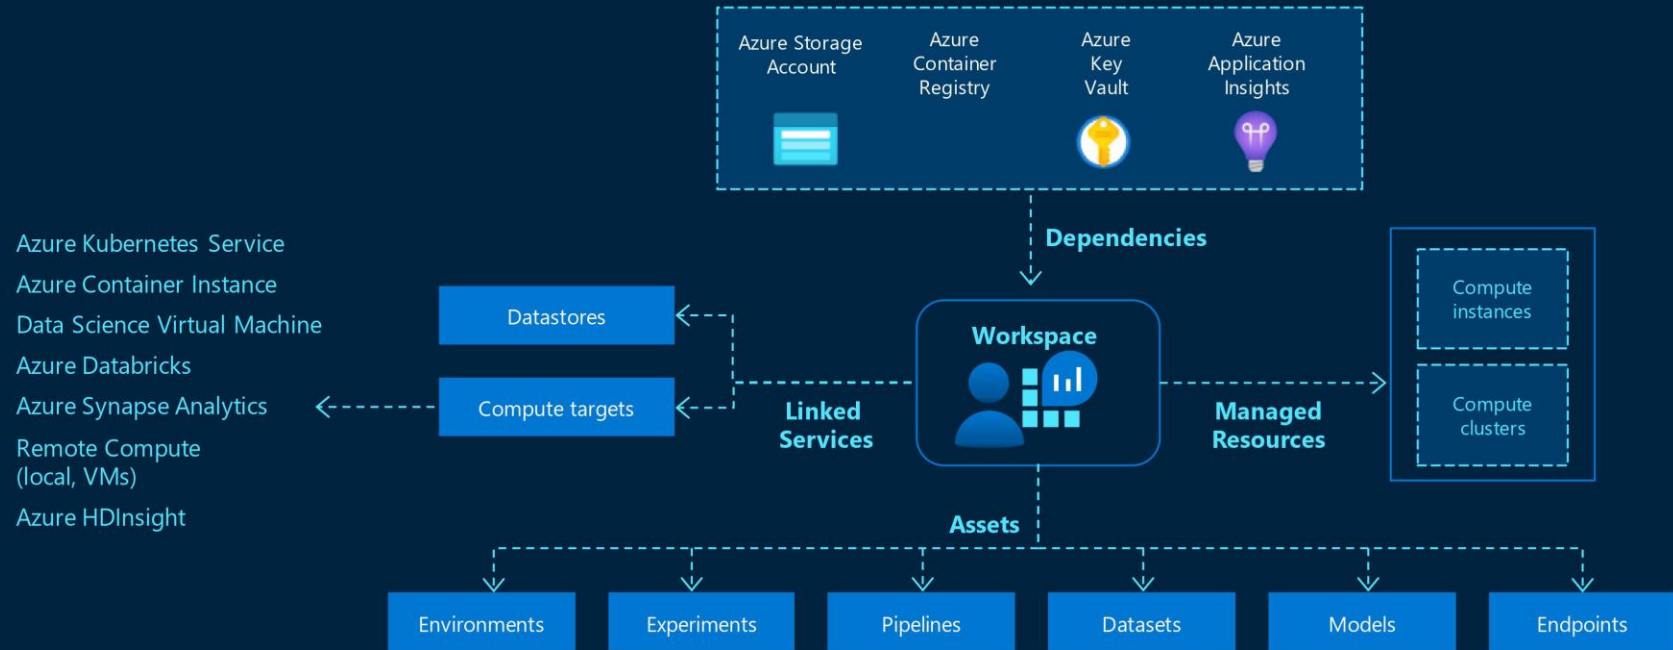

Datastores

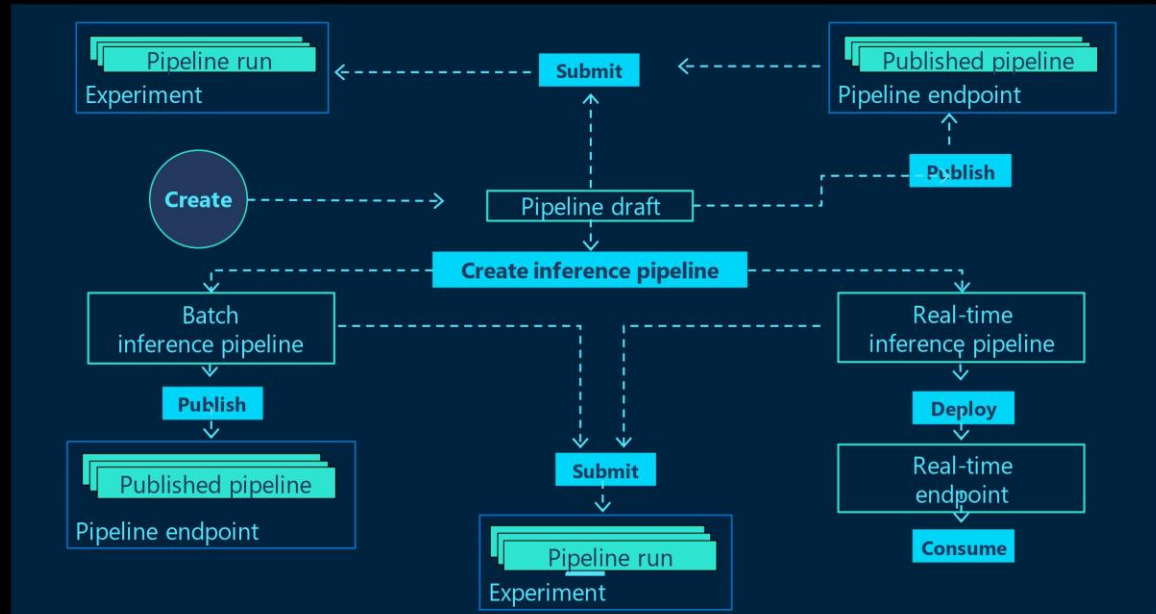

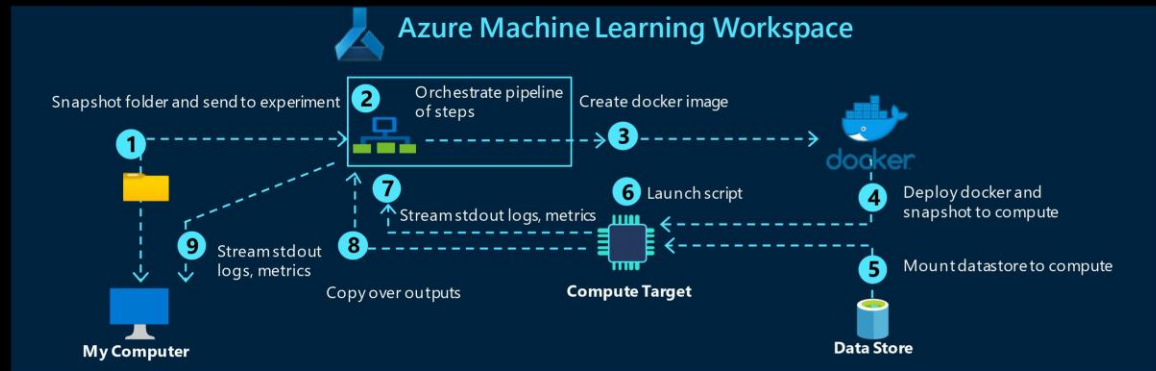

Compute Target

Data Labelling

Key Elements of Azure Machine Learning

ML Pipelines

E2E ML Life Cycle

Data Preparation

Multiple Data Sources
Multiple Formats
Cleansing
Transformation

Model Building

Choice of algorithms
Choice of language
Choice of development tools
Local Testing

Model Training

Code first, No Code, Low Code
Distributed Training
Azure Arc
K8s

Model Registration and Management

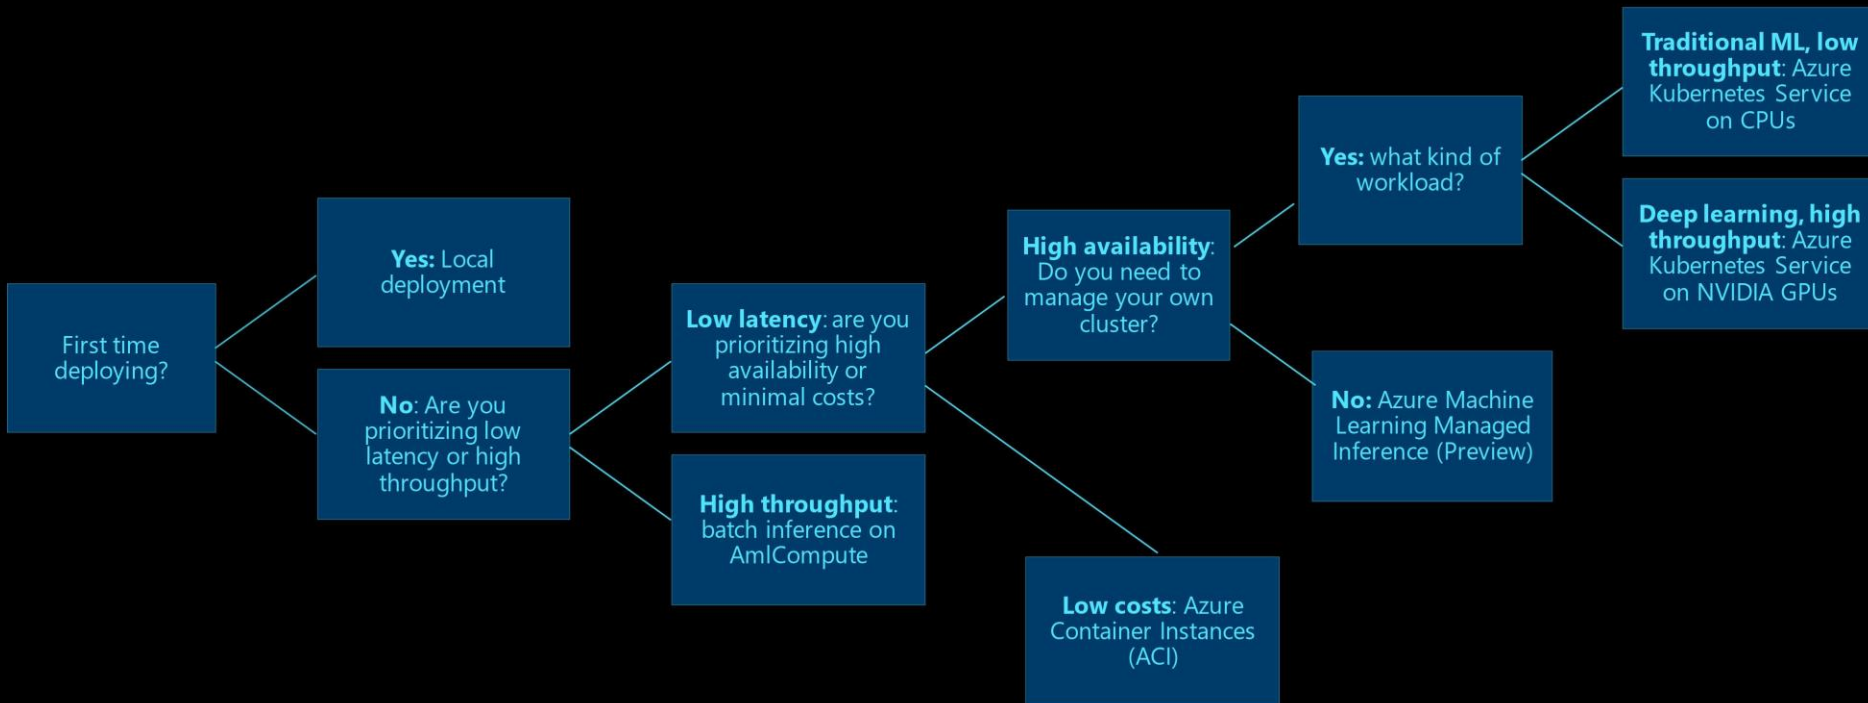

Containerization
Versioning
Model Repository
Track Experiments

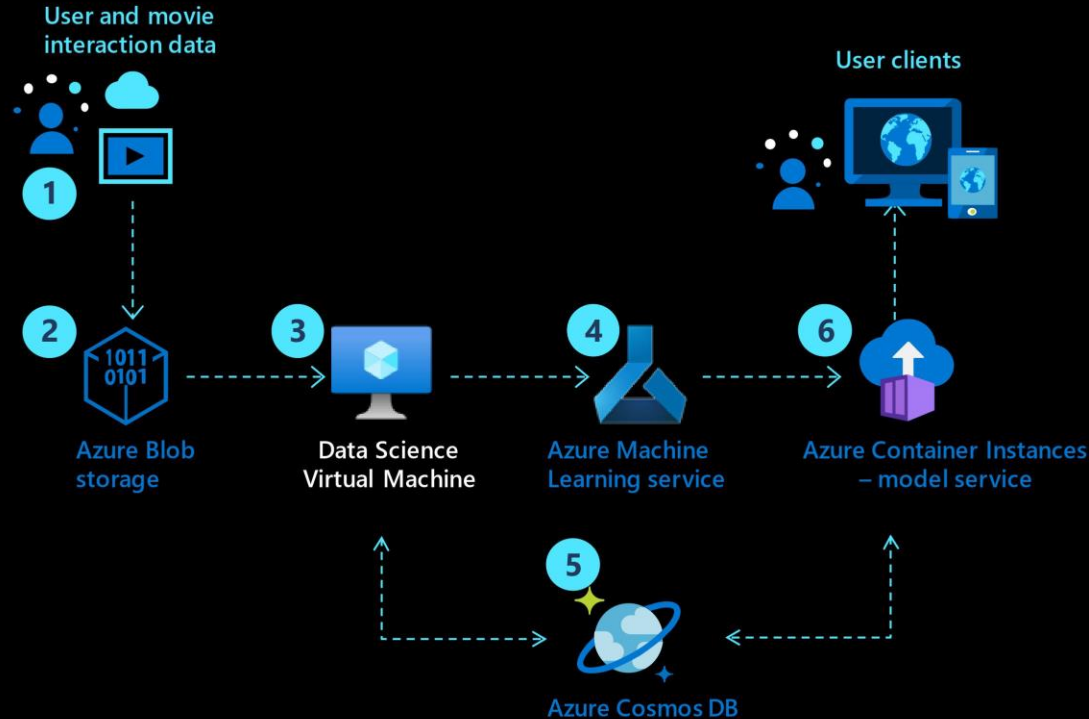

Model Deployment

Deploying your model
Real time Inferencing
Batch Inferencing
Monitoring

Choosing an inferencing target

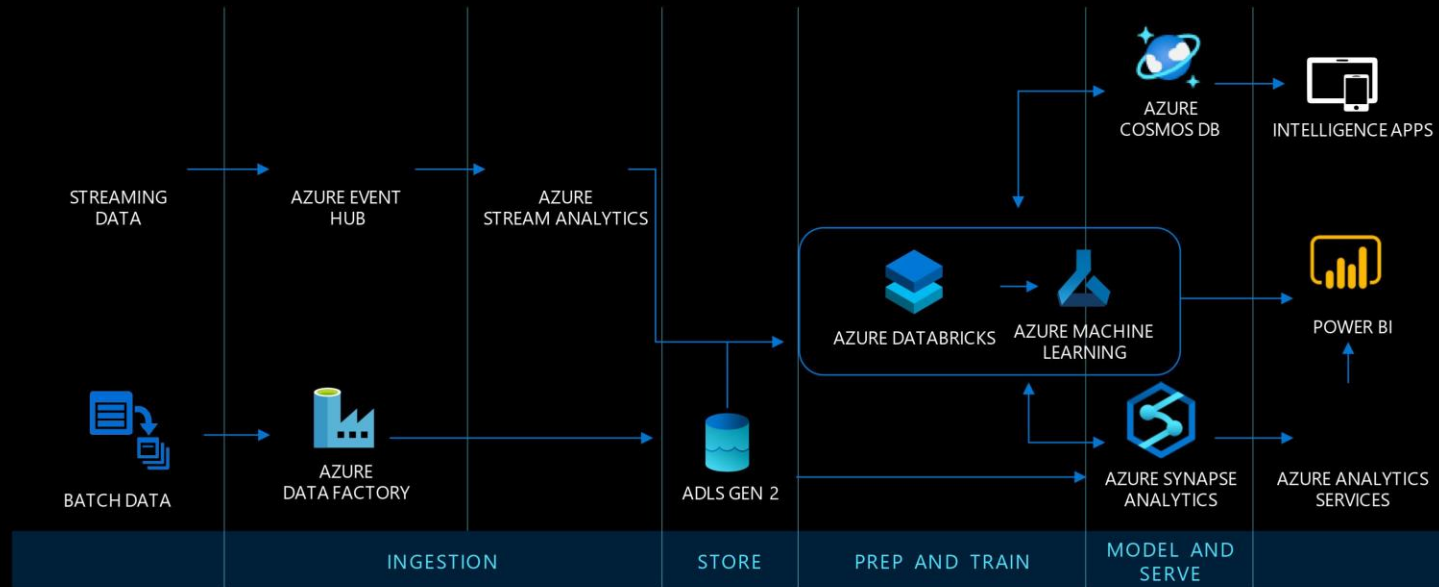

Movie recommendations on Azure

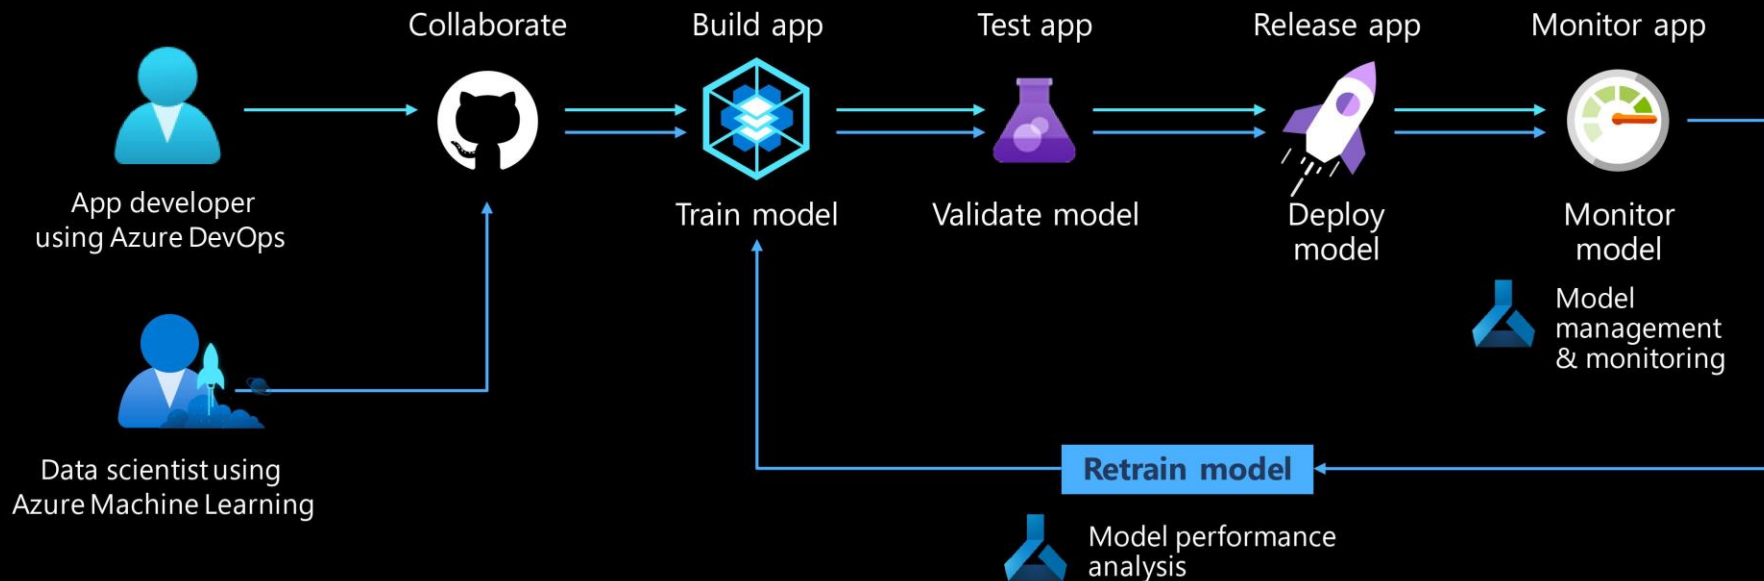

AzureML + Synapse + Databricks + Power BI for fraud detection

Components of the MLOps lifecycle

MLOps Workflow

Model reproducibility

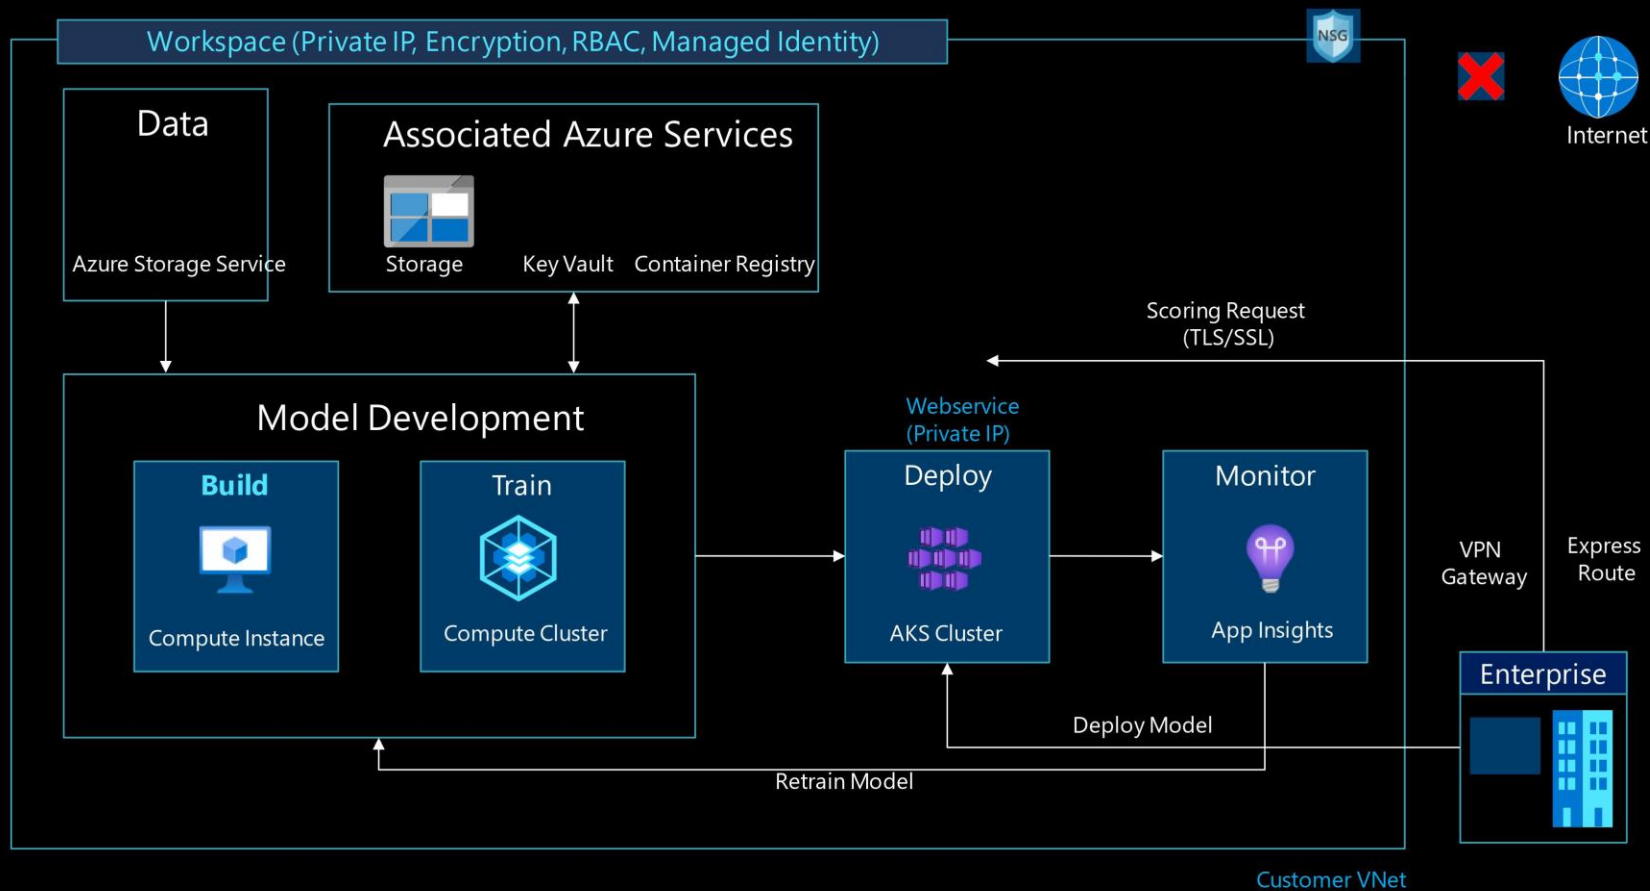

Model validation

Model deployment

Model retraining

E2E Secure AzureML

Assess Fairness and Mitigate Unfairness

Training a Fairness-Unaware Predicto

```
from sklearn.compose import ColumnTransformer

column_tranformer = ColumnTransformer([('onehot', OneHotEncoder(handle_unknown='ignore'),
    ['Sex', 'Country', 'Race', 'Workclass', 'Marital Status', 'Occupation', 'Relationship']),
    ('scaler', StandardScaler(), ['Capital Gain', 'Capital Loss', 'Hours per week',
    'Education-Num'])])

# Append classifier to preprocessing pipeline.
# Now we have a full prediction pipeline.
clf = Pipeline(steps=[('preprocessor', column_tranformer),
    ('classifier', LogisticRegression(solver='liblinear', fit_intercept=True))])

model = clf.fit(X_train, Y_train)
```

Do you have any questions?
